### **How does the foam-gun work ?**

Special products like the foam-gun directly connected to the public water pipe produce a cleaning foam. The water pressure sucks in the cleaning agent and air, both are being mixed to a consistent foam, sprayed out via the spraying head and the foam wand. The cleaning agent can also purposely and automatically be diluted via a built-in proportioner so that the right mixture of chemical and water as foam can be chosen for the cleaning application.
